WHAT METAL TO CHOOSE?

DURILIUM - Durilium is the finest non-precious metal ever developed. It has a rich platinum-white silver finish, resists scratches, won't tarnish, and has strong durability. Comes in gold durilium as well. **MOST POPULAR**

STERILIUM - Sterilium is Premium Sterling Silver. It has a vibrant bright white color and is tarnish resistant. Sterilium has improved hardness over regular Steriling Silver that provides a high lustre finish.

TWO-TONE - This is real gold that can be supplemented in for the logo and/or wording on the top the ring to give a gold/silver looks to the ring. It will also increase the overall physical value of the ring.

6KT GOLD - 4kt and 6kt is the most popular gold in the industry. It is affordable and more durable than 10kt. The added Palladium gives it strength and has the lustre and brilliance of 10kt and 14kt gold.

10KT GOLD - 10kt is 41.6% pure gold. It is a very strong and durable metal that is very valuable.

14KT GOLD - 14kt is 58% pure gold. It's strong and durable, has definition and more pleasing color. 10kt is stronger than 14kt gold.
